

Task 1: Find 10 different model providers and their models released in last 12 months

Model 1:

Detail	Information
Model Name	Claude-sonnet-4-6
Provider	Anthropic
Release Date	Feb 2026
Cutoff-Date	August 2025
Input Cost	\$3 per 1M tokens
Output Cost	\$15 per 1M tokens
Context Window	100,000 tokens
Public/Private	Private accessed via Claude API
When to Use	Complex reasoning, long documents, coding, analysis tasks requiring deep understanding

Model 2:

Detail	Information
Model Name	XAI: Grok 4.3
Provider	XAI
Release Date	April 2026
Cutoff-Date	December 2025
Input Cost	\$1.25 per 1M tokens
Output Cost	\$2.50 per 1M tokens
Context Window	100,000 tokens
Public/Private	Private accessed via X API
When to Use	well-suited for long-document analysis, deep research, and multi-step agentic tasks.

Model 3:

Detail	Information
Model Name	Gemini 2.0 Flash
Provider	Google
Release Date	Feb 2025
Cutoff-Date	Jan 2025
Input Cost	\$0.10 per 1M tokens
Output Cost	\$0.40 per 1M tokens
Context Window	100,000 tokens
Public/Private	Private accessed via Google AI Studio
When to Use	Fast responses, multimodal tasks and low cost.

Model 4:

Detail	Information
Model Name	OpenAI: GPT Chat Latest
Provider	Open AI
Release Date	May 2026
Cutoff-Date	Dec 2025
Input Cost	\$5 per 1M tokens
Output Cost	\$30 per 1M tokens
Context Window	400,000 tokens
Public/Private	Private
When to Use	Used for high-stakes professional work and long-running agentic tasks that require PhD-level reasoning, advanced coding, and 50% fewer hallucinations than previous models

Model 5:

Detail	Information
Model Name	Google: Nano Banana 2 (Gemini 3.1 Flash Image Preview)
Provider	Google
Release Date	Feb 2026
Cutoff-Date	January 2025
Input Cost	\$0.50 per 1M tokens
Output Cost	\$3 per 1M tokens
Context Window	65,536 tokens
Public/Private	Private
When to Use	Use for fast image generation that requires precise text rendering, subject consistency, and real-time grounding in web search data.

Model 6:

Detail	Information
Model Name	Sourceful: Riverflow V2 Pro
Provider	Sourceful
Release Date	Feb 2026
Cutoff-Date	Jan 2025
Input Cost	\$0.15 per image
Output Cost	\$0.15 per 1K/2K Output image, & \$0.33 per 4K output image
Context Window	8192 tokens for text prompts, 4.5 MB limit request for image upload
Public/Private	Private
When to Use	Use for industrial-grade design tasks that require millimeter-level precision, flawless typography (custom fonts), and perfect product consistency for commercial-ready assets like packaging and ads understanding

Model 7:

Detail	Information
Model Name	NVIDIA: Llama Nemotron Embed VL 1B V2 (free)
Provider	NVIDIA
Release Date	Feb 2026
Cutoff-Date	Jan 2025
Input Cost	\$0 per 1M tokens
Output Cost	\$0 per 1M tokens
Context Window	131,072 tokens
Public/Private	Public
When to Use	Used to build high-speed multimodal RAG systems that can accurately retrieve information from a mix of text, images, tables, and complex charts

Model 8:

Detail	Information
Model Name	Kling: Video v3.0 Pro
Provider	Kling AI
Release Date	April 2026
Cutoff-Date	Feb 2026
Input Cost	\$0.0001 per text prompt token (API)
Output Cost	Billed per second of video; typically \$0.112 per second (silent) or \$0.14 per second (with audio)
Context Window	10,000 tokens
Public/Private	Private
When to Use	Used for cinematic, high-fidelity filmmaking that requires multi-shot sequencing, native 4K resolution, and "Director Memory" for perfect character consistency across 15-second clips

Model 9:

Detail	Information
Model Name	Google: Gemini 3.1 Flash TTS Preview
Provider	Google
Release Date	April 2026
Cutoff-Date	January 2025
Input Cost	\$1 per 1M text tokens
Output Cost	\$20 per 1M audio tokens
Context Window	8,192 tokens
Public/Private	Private
When to Use	Text-to-speech model used to generate highly expressive, multi-speaker dialogue where vocal style, pacing, and emotion are directed using over 200 natural language audio tags. Produces Audio output across 70+ languages.

Model 10:

Detail	Information
Model Name	OpenAI: GPT-4o Mini Transcribe
Provider	Open AI
Release Date	May 2026
Cutoff-Date	June 2024
Input Cost	\$1.25 per 1M tokens
Output Cost	\$5 per 1M tokens
Context Window	128,000 tokens
Public/Private	Private
When to Use	Used for massive-scale, budget-conscious transcription projects that need better language recognition and lower word error rates than traditional Whisper models.
