13. Token Size Validation - Triggered BLOCK

The screenshot displays the OpenAPI Explorer interface for a REST client. At the top, it shows the API endpoint as `POST http://localhost:4000/api/detect/token`. Below the endpoint bar, there are tabs for Docs, Params, Authorization, Headers, Body, Scripts, and Settings. The 'Body' tab is selected, showing a raw request body consisting of a long string of placeholder text followed by a JSON object: `{ "model": "gpt-3.5-turbo" }`.

Below the request body, the response section indicates a `422 Unprocessable Entity` status. The response body is shown in JSON format:
